InQwire®
Diagnostic Guidewires

FLUSH HOOP
• Improved design—Simplifies wire flushing
• Luer lock flush port—Provides quick, easy syringe attachment
• Rotating flush port—Protects the wire tip
• Small size—Maximizes back table space
• Hoop for new guide wire configuration

J STRAIGHTENERS
• New thumb indentation with more flexible materials—Facilitates movement of the wire and straightener as one unit
• Improved larger funnel shaped proximal opening—Faster and easier wire loading
• Lengthened tip taper body design—Directs straightener toward the center of luer opening
RINGMASTER

- Convenient way to access wires
- Hydration—Keeps wires hydrated during procedure
- Unique size—Optimizes space on back table
- Bright color—Easily visualized in low light
- Versatile—Holds catheters & wires
- Cost effective—Potential decrease in wire contamination
- Identification—Separates wires for easy selection

FINGER-STRAIGHTENABLE

Does not require reloading the J-straightener

PRECISE J-TIP MEMORY

Consistency in the wire performance

DIMENSIONAL CONTROL

Tight tolerances ensure catheter and sheath compatibility

PRE-COATING

An innovative process that coats the complete wire surface with PTFE, prior to guide wire assembly. This provides a smooth consistent surface, for increased catheter compatibility.

INQWIRE

- Pre-Coated

OTHERS

- Spray-Coated

BENEFITS OF PRE-COATING

SMOOTH SURFACE

- Less friction—increased tracking
- Consistent performance

SAFETY

- Reduction of blood clot formation and adherence
- Resists flaking of PTFE coating

INCREASED LUBRICITY

- Better catheter compatibility

IMPROVED DURABILITY

- Consistent performance after multiple catheter exchanges

INSERTION FORCE

- Less force required for wire passage through catheters— aids in wire stability and positioning

HEPARIN COATED WIRES

- Available in new configuration
- May help minimize the likelihood of blood clot formation on the guide wire
