DESCRIPTION:

Angiographic catheters are single-use, sterile, non-pyrogenic, disposable intravascular catheters.

INDICATIONS:

Angiographic catheters are designed to be used for delivering radiopaque media to selected sites in the vascular system in conjunction with routine diagnostic procedures. Angiographic catheters with marker bands may also be used for anatomical measurements.

CONTRAINDICATIONS:

None known.

WARNING:

• The Impress® angiographic catheter with hydrophilic coating should not be used in the coronary arteries.
• Angiographic catheters are single use.
• Recommended guide wire size: See the individual catheter label.
• Guide wire use has been associated with greater incidence of thrombus formation.

PRECAUTIONS:

• Do not use if package is opened or damaged.
• Do not use after expiration date.
• Do not autoclave.
• Carefully remove the catheters from the package by grasping the hub and slowly withdrawing it from the package.
• Inspect catheter and packaging for damage before use.
• The Impress® angiographic catheter is intended for use with the catheter delivery system in which it is supplied.
• Use only catheters with control table or label.
• Catheter segments are not recommended for arterial puncture sites.
• For catheters containing hydrophilic polymer coating on the distal surface of the catheter: the surface of the final portion of the catheter must be completely wet to remain lubricated. Proper caution must be taken to wet the catheter prior to and during use.

ADVERSE EVENTS:

Merit Medical angiographic catheters should be used by physicians familiar with percutaneous catheter introduction. Complications which may be associated with the use of angiographic catheters include, but are not limited to the following.

• Thrombus formation/emboli
• Arteriovenous fistula
• Risk of dislodgement
• Risk of infection
• Risk of arterial perforation
• Vascular occlusion
• Stroke and death

REUSE PRECAUTION STATEMENT

For single patient use only. Do not reuse, reprocess or resterilize. Reuse, reprocessing or resterilization may compromise the structural integrity of the device and/or lead to device failure which, in turn, may result in patient injury, illness, or death. Reuse, reprocessing or resterilization may also result in contamination of the device and/or patient, which may result in injury, illness, or death. Contamination of the device may lead to injury, illness or death of the patient.

DIRECTIONS FOR USE:

1. A coated guide wire is recommended for use with Merit angiographic catheters.
2. Introduce the catheter into the blood vessel using vascular entry technique of choice.

PIGTAIL catheters. Pigtail catheters are fitted with a straightener. It is split for easy removal after the catheter tip is on the guide wire.

• Slide straightener forward until pigtail is straight.
• Place catheter tip on guide wire and remove straightener by pulling on the straightener tab.

4. Marker Band: Anatomical measurement accuracy is ±4%.

Storage:

Sterile and non-pyrogenic in unopened and undamaged inner package.

Shelf Life: The shelf life is established at 3 years from date of sterilization.
