Patient Name: ____________________________ Stent Lot #: ______________________
Date of Implant: __________________________ Stent Size: ______________________
Implant Location: __________________________
Implanting Physician: _____________________
Hospital: ________________________________ Contact Number: ________________
MRI Safety Information

Non-clinical testing has demonstrated that the AEROmini is MR Conditional. A patient with this device can be safely scanned in an MR system meeting the following conditions:

- Static magnetic field of 1.5T and 3.0T only
- Maximum spatial gradient magnetic field of 3,000 Gauss/cm (30 T/m) or less
- Maximum MR system reported, whole body averaged specific absorption rate (SAR) of 2 W/kg (Normal Operating Mode)

Under the scan condition defined above, the AEROmini is expected to produce a maximum temperature rise of 2.0°C after 15 minutes of continuous scanning.

In non-clinical testing, the image artifact caused by the device extends approximately 5 mm from the AEROmini when imaged with a gradient echo pulse sequence and a 3Tesla MRI system. The artifact does obscure the device lumen.
