APBI FOR EARLY-STAGE BREAST CANCERS
A STANDARD OF CARE OPTION FOR BREAST CONSERVING THERAPY

- Proven Efficacy
- Excellent Tolerability
- Unparalleled Cosmesis
- Treatment in 2–5 Days*

*based on clinicians’ preferred treatment protocol.
Ask us about a 2-day treatment regimen
“Accelerated Partial Breast Irradiation (APBI) brachytherapy is an attractive treatment approach with a high level of precision, versatility and flexibility. The benefits of APBI brachytherapy include an at least four-fold reduction in total radiation exposure to healthy surrounding tissue and nearby structures...preservation of future treatment options; and a notably shorter course of therapy.”

**Proven Efficacy**

**GEC-ESTRO Brachytherapy vs. WBI Phase 3 Clinical Trial**

- No difference in local recurrence, disease-free survival or survival at 5 years

**Objective:** to prove the hypothesis that local control rate is non-inferior with brachytherapy compared to WBI

| 5-Year Results                  | Brachy | WBI  | p-value $^\dagger$

“Our results confirm that adjuvant APBI using multicatheter brachytherapy after breast-conserving surgery is as effective as adjuvant whole-breast irradiation for carefully selected patients with early breast cancer.”

$^\dagger$Groupe Européen de Curiethérapie of European Society for Radiation And Oncology

$p$-value <0.05 indicates statistical significance

**Less Toxicity**

**Favorable Toxicity Rate**

Preserve Future Treatment Options

“In the case of a tumor recurrence, breast cancer treatment can be performed a second time with APBI brachytherapy allowing the breast to still be preserved and avoiding mastectomy.”

Excellent Cosmetic Results

Limited fibrosis and skin toxicity, providing excellent cosmetic results. Catheter placement can be planned to hide the scar.

APBI Patient Selection Criteria

Convenient

The short treatment course (five days or less) allows patients to get back to their routines more quickly.

Visit us at **CiannaMedical.com** or contact your local Account Representative and find out how we can help you deliver efficient, patient-focused, and cost-effective care.
Innovative design of the SAVI Applicator combines the precise dosimetry of interstitial brachytherapy with the ease and convenience of single-entry devices.

- Provides targeted radiation where it's needed most while minimizing dose to healthy tissue—decreases toxicity and lowers the risk of cosmetic side effects.

- ‘SAVI Sculpt Dosing’ delivers customized radiation based on patient-specific anatomy which may increase the number of women who are eligible for treatment with APBI.
